01 / SUMMARY

Product engineer who ships complete products end to end — **five shipped products** across Android, iOS, web and Windows, all built solo: design, code, release, operations. Co-founder and active developer of **RutaLive** (rutalive.com), a courier-logistics SaaS live in production, competing with major US/Canadian dispatch platforms. Looking to join a product team where I can own features across the whole stack from day one.

02 / EXPERIENCE

RutaLive — Co-founder & Full-Stack Engineer

Nov 2025 — present · rutalive.com

Multi-tenant SaaS for courier companies — web, iOS (App Store), Android (Google Play), Windows. Born from a real need: replacing the software a friend's courier company was using. Built and operated single-handedly.

- **Backend:** Node.js + Express, MongoDB, Socket.io real-time layer (delta updates, event dedup, offline-tolerant reconnection), JWT auth with session invalidation, worker-pool PDF/QR generation
- **Web:** React 18 + Vite operator dashboard — live courier map (Mapbox GL), orders, invoicing, analytics; marketing site on Astro
- **Mobile:** Flutter for iOS + Android — background GPS, proof of delivery (photo / signature / QR), push notifications, offline-tolerant socket sync
- **Integrations:** QuickBooks (invoices, bills, US sales tax), Lemon Squeezy subscriptions, Mapbox geocoding/routing
- **Infra:** Docker Compose on VPS, Nginx, Codemagic CI; versioned public REST API; i18n in 6 languages
- **The hard parts:** async multi-user consistency, sockets that survive a courier's basement dead zone, fixes tested across every platform at once

03 / SHIPPED PRODUCTS

- **Kora Wallet** · Feb 2026 — non-custodial multi-chain crypto wallet (BTC, ETH, SOL, TRX, BNB, LTC, DOGE + custom tokens), Flutter; key derivation compatible with major wallets, zero secrets in code; Windows market widget. My daily driver since day one.
- **Retro Arcade** · Oct–Nov 2025 — arcade game collection on Google Play; first graphics work: external textures, sprites, sound.
- **Currency Converter+** · Oct 2025 — offline-first converter, Google Play + web; first online product: real-time external APIs, caching, network-failure handling.
- **Sudoku** · Sep–Oct 2025 — first product, full cycle from idea to Google Play; 4 modes, ranked championship.

04 / SKILLS

Core: JavaScript (Node.js, Express, React), Dart (Flutter), HTML/CSS

Infra: Docker, Nginx, Linux VPS, Git, Codemagic CI

Practices: multi-tenant architecture, i18n, E2E testing (Playwright)

Data & real-time: MongoDB, SQLite, Socket.io, Firebase

APIs: REST design, OAuth2, Mapbox, payments, blockchain RPC

Workflow: AI-assisted development — with full ownership of the result
